Apex Continuity Operations Center

Operations Overview — Synthetic Dataset

Document ID: OPS-OVER-2025-01 | SYNAPTIX COMMAND Prototype

1. Scope

This workspace models a fictional industrial operations center responsible for preventive and corrective maintenance, incident management, and shift handover. All equipment IDs, work orders, and incidents are synthetic.

2. Key Assets

Tracked equipment includes Primary Coolant Pump, Conveyor Line 2, HVAC Zone C, Backup Generator, Air Compressor 5, and PLC Controller Rack. Work orders and incidents reference these assets consistently.

3. Planted Test Conditions

• Multiple Overdue work orders on EQ-OP-CNV-02 (Conveyor) and EQ-OP-CMP-05 (Compressor). • Recurring mechanical incidents on Conveyor Line 2 (five related records in Incident_Register.csv). These support queries for recurring incidents and overdue maintenance.

4. Document Map

File	Content
Operations_Overview.pdf	This overview
Maintenance_Records.xlsx	80 work orders
Incident_Register.csv	50 incidents including recurring set
Standard_Operating_Procedure.md	SOP for maintenance & incidents
Shift_Handover_Notes.txt	Sample shift notes
Equipment_Inspection_Form.png	Inspection form image (OCR)
Operations_Workflow_Definitions.json	Workflow / state definitions
