Northbridge Synthetic University

Academic Performance Report — 2022-23 to 2024-25

Synthetic Dataset for SYNAPTIX COMMAND Testing

1. Institution Overview

Northbridge Synthetic University (NSU) is a fictional higher-education institution created solely for generating synthetic academic data. Student identifiers follow the pattern STU-SYN-####. This report aggregates performance, attendance, and completion metrics across seven courses and three academic years.

2. Performance Highlights

Overall grade distributions are consistent with a selective synthetic cohort. Average overall scores typically fall in the 70–85% range. Attendance correlates positively with final grades in the underlying student-level data (Student_Performance_Synthetic.xlsx).

3. Notable Trend — CS-410 Distributed Systems

Course CS-410 exhibits a planted decline in completion rate in academic year 2024-25 (approximately 35% non-completion in the sample). This anomaly is intentional for testing detection of declining course success rates. See Examination_Analysis.md and Course_Enrollment.json.

4. Data Inventory

File	Content
Student_Performance_Synthetic.xlsx	350 student-course records + course summary
Attendance_Records.csv	300 session-level attendance records
Course_Enrollment.json	Enrollment and completion by course/year
Curriculum_Review.docx	Curriculum committee notes
Examination_Analysis.md	Assessment and completion analysis

All data is synthetic. No real student records are present.
