Meridian Synthetic Medical Center

Hospital Operations Report — FY2024 / FY2025 (Synthetic)

Document ID: HC-OPS-2025-001 | For SYNAPTIX COMMAND Prototype Testing

1. Facility Overview

Meridian Synthetic Medical Center (MSMC) is a fictional 320-bed acute-care facility used exclusively for generating synthetic operational data. This report summarizes appointment volumes, waiting times, department utilization, and equipment maintenance status. All patient identifiers follow the pattern PAT-SYN-#### and are non-identifiable.

2. Appointment & Waiting Time Trends

Across 400 synthetic appointments, Emergency Department exhibited the highest average wait times (typically 25–110 minutes). Radiology showed occasional long waits (60–120 min) linked to equipment scheduling. No-show rates varied by department; detailed figures are in Synthetic_Appointment_Data.xlsx and Department_Utilization.csv.

3. Equipment Maintenance Status

Two equipment items are deliberately marked Overdue for testing: EQ-SYN-CT-02 (CT Scanner B) and EQ-SYN-VENT-05 (Ventilator Bank 5). See Equipment_Maintenance_Log.xlsx. All other assets are within scheduled service windows.

4. Key Operational Indicators (Synthetic)

Indicator	Value	Source
Total Appointments (sample)	400	Synthetic_Appointment_Data.xlsx
Departments Tracked	6	Department_Utilization.csv
Overdue Maintenance Items	2	Equipment_Maintenance_Log.xlsx
Avg ED Wait (approx)	40–70 min	Appointment data

5. Important Disclaimer

This dataset contains no real patient information. Synthetic clinical or operational metrics are not medically valid and must not be used for diagnosis, treatment, or real-world operational decisions. They exist solely to exercise document parsing, RAG, analytics, and workflow features of the SYNAPTIX COMMAND platform.
